

ANNI MCHENRY

Anni@Fieldlight.com | (417) 841-7139 | San Francisco, CA

Executive Summary

Systems and operations leader with 15+ years of experience turning complex, regulated, and ambiguous environments into working operating models, software workflows, governance structures, and cross-functional execution. Current work focuses on human-owned AI collaboration systems with traceable memory, consent, authorship, and publication boundaries.

Core Capabilities

AI systems architecture and human-AI collaboration | Operations transformation and process design

Product implementation and workflow automation | Compliance, governance, risk, and auditability

Data-informed leadership and cross-functional execution | M&A; integration, policy research, and public-private systems

Selected Experience

Independent Systems Architect - AI Infrastructure | Fieldlight + Sanctum | 2023-Present

- Designed a local-first AI collaboration architecture separating memory and governance substrate from runtime communication and routing.
- Built a Python/YAML distributed messaging prototype with framed TCP transport, structured payloads, routing controls, trust levels, TTL and fallback behavior, deterministic request/response handling, and audit traces.
- Defined consent and authorship primitives for identity, continuity, source truth, publication boundaries, NDA exchange tracking, document hashes, timestamps, and trace correlation.

Senior Operations and Systems Leader | Burrell Center | 2018-2021

- Led enterprise transformation for a regional behavioral health organization with \$146M in annual revenue.
- Delivered a \$12M EHR implementation on time and under budget; recovered \$1.5M through workflow correction and automation.
- Built operational infrastructure for onboarding, compliance, ticketing, support intake, and acquisition integration.

Product Operations and Internal Systems Lead | Netsmart | 2013-2016

- Owned strategic initiatives inside a national behavioral health software company, including upgrade operations and CRM product ownership.
- Managed upgrade schedules across 400+ client environments; reduced accounts receivable 19% through Agile-designed customer portals and improved client satisfaction 32% through upgrade automation and messaging.

Commercial and Implementation Operations | National Enzyme Company; Healthcare First | 2016-2018

- Directed an 8-person business development team; improved client engagement 67%, reduced manufacturing time 18%, and increased acquisition appeal by offloading unprofitable accounts.
- Implemented clinical and billing systems for home health and hospice; reduced onboarding time 17%, increased billing throughput 12%, and standardized project delivery using PMI methods.

Policy Research Analyst | U.S. Senate, Office of Senator Roy Blunt | 2022

- Researched antitrust, healthcare, and financial policy; attended Senate oversight hearings and prepared recommendations on systemic policy issues.

Selected Public Work

Fieldlight Mesh: Runtime transport, routing, consent exchange flow, and live trace architecture.

Sanctum Zero: Memory substrate, continuity primitives, mirror architecture, and governance scaffolding.

Aerial Safety Companion / Signal Hunting: Applied sensing, threat detection, OSINT, and user-owned safety infrastructure concepts.

Education

B.S. Finance, Economics; Minor: Philosophy - Drury University
